

Product Inventory Management API

REST API for managing products, categories, and suppliers — built with Laravel 11 and authenticated via Laravel Sanctum.

Base path `/api` Auth `Bearer token` (Sanctum) Format `application/json` Endpoints 21

AUTHENTICATION

Every endpoint below except `/register` and `/login` requires a bearer token. Register or log in to receive a token, then send it as `Authorization: Bearer <token>` on every subsequent request. Call `/logout` to revoke the current token.

POST `/register`

PUBLIC

Register a new user

REQUEST BODY

FIELD	TYPE	
name	string	required
email	string · email	required
password	string · password	required
password_confirmation	string · password	required

RESPONSES

- 201 User registered, token issued
- 422 Validation error

POST /login

PUBLIC

Authenticate and receive an API token

REQUEST BODY

FIELD	TYPE	
email	string · email	required
password	string · password	required

RESPONSES

200 Login successful, token issued

422 Invalid credentials

POST /logout

BEARER

Revoke the current access token

RESPONSES

204 Logged out

RESOURCES

Products, categories, and suppliers each expose standard CRUD endpoints. Products additionally support filtering and pagination on the list endpoint.

Products

5 endpoints

GET

/products

BEARER

List products

Returns a paginated list of products, optionally filtered by category, price range, and stock level.

QUERY PARAMETERS

FIELD	TYPE	
category_id	integer	optional
min_price	number	optional
max_price	number	optional
stock_level	enum: out_of_stock, low_stock, in_stock	optional
per_page	integer · default 15, max 100	optional

RESPONSES

- 200 A paginated list of products
- 401 Unauthenticated

POST

/products

BEARER

Create a product

REQUEST BODY

FIELD	TYPE	
category_id	integer	required
name	string	required
sku	string	required
description	string, nullable	optional
price	number	required
stock	integer	required
supplier_ids	integer[]	optional

RESPONSES

- 201 Product created
- 422 Validation error

GET

/products/{product}

BEARER

Get a single product

RESPONSES

200 The product

404 Not found

PUT

/products/{product}

BEARER

Update a product

Accepts the same fields as create, all optional — only supplied fields are updated.

RESPONSES

200 Product updated

422 Validation error

DELETE

/products/{product}

BEARER

Soft-delete a product

The product is soft-deleted and excluded from all subsequent list/show queries; the record is retained in the database.

RESPONSES

204 Product deleted

Categories

5 endpoints

GET

/categories

BEARER

List categories

QUERY PARAMETERS

FIELD

TYPE

page

integer · default 1

optional

RESPONSES

200 A paginated list of categories

401 Unauthenticated

POST /categories

BEARER

Create a category

REQUEST BODY

FIELD	TYPE	
name	string	required
description	string, nullable	optional

RESPONSES

201 Category created

422 Validation error

GET /categories/{category}

BEARER

Get a single category

RESPONSES

200 The category

404 Not found

PUT /categories/{category}

BEARER

Update a category

REQUEST BODY

FIELD	TYPE	
name	string	optional
description	string, nullable	optional

RESPONSES

200 Category updated

422 Validation error

DELETE /categories/{category}

BEARER

Delete a category

RESPONSES

204 Category deleted

Suppliers 5 endpoints

GET /suppliers

BEARER

List suppliers

QUERY PARAMETERS

FIELD	TYPE	
page	integer · default 1	optional

RESPONSES

200 A paginated list of suppliers

401 Unauthenticated

POST /suppliers

BEARER

Create a supplier

REQUEST BODY

FIELD	TYPE	
name	string	required
email	string · email	required
phone	string, nullable	optional
address	string, nullable	optional

RESPONSES

201 Supplier created

422 Validation error

GET /suppliers/{supplier}

BEARER

Get a single supplier

RESPONSES

200 The supplier **404** Not found

PUT /suppliers/{supplier}

BEARER

Update a supplier
